## **Technical data sheet**

FOR THE ROTARY ACTUATOR

HSI 07 SP

Type:

Type: HSL 07 SP Art. no.: 3209618				
Model		Vane-type rotary actuator In principle the actuation has a pressure- and viscosity-dependent internal leak volume flow rate. For example, if an external torque affect the rotary actuator shaft in an idle mode, the rotary actuator shaft		
		shifts slowly from its angle position!		
Series	•••••	HSL: Rotary actuator as basic model without an end position damping and without an internal rotating angle limitation.		
			•	uator can be equipped with components are adapted to the specific application,
		5	such as:	
		- Valve connection plates with differnt hole patterns		
	<ul> <li>Control valves and rotary encoders of all well-known manufacturers</li> <li>Hubs and pulsation accumulators</li> </ul>			
Size		07	huns allu hu	
Mounting style		07		
- Rotary actuator housing		single-sided face mounting with thread according to DIN 13-1 - M 16		
	Strength class of the fastening screws $\geq$ 8.8			
- Drive shaft end		two parallel keys according to DIN 6885-1 - B25x14x110 (2 x 180°)		
- Centre hole in the drive shaft end Connection type		DIN 332-2 - D M 24 pipe thread according to DIN ISO 228-1;		
		A and B: G1/2; axial in the rear cylinder cover		
Installation position		arbitrary; Depending on the position of installation and case of application a load may cause running		
	ahead the rotary actuator drive shaft. In such a case, appropriate countermeasures must be taken!			
Installation instructions	see operating instructions			
Rotary angle limitation Intended use	An external rotary angle limitation is recommended! The rotary actuator is intended for generation an alternating torque in a stationary application.			
		merotary		
max. nominal pressure	р <sub>м max</sub>	bar	160	1)
min. minimum pressure	р <sub>мmin</sub>	bar	15	Required for a proper functioning of the load-free drive.
max. starting pressure without load	p <sub>St max</sub>	bar	8.0	at an output pressure of p = 1 bar
specific torque	$M_{sp}$	Nm/bar	55.13	torque constant <sup>2</sup> )
theoretical torque	$M_{\text{th}}$	Nm	8 821	at $\Delta p = p_{N \max}$ <sup>2</sup> )
mechanical efficiency ≈	$\eta_{\text{ mec}}$	-	0.950	at $\Delta p = p_{N \max}$ and $\omega = \omega_{\max}$ <sup>3</sup> )
effective torque	$M_{eff}$	Nm	8 380	at $\Delta p = p_{N max}$ and $\omega = \omega_{max}$ <sup>3</sup> )
number of working chambers	Z	-	2	
nominal angle of rotary	φN	grad	282	The internal stop must not be approached! 2)
max. operating angle of rotary	$\phi_{\text{A}\text{max}}$	grad	280	
recom. min. operating angle of rotary	$\phi_{\text{A}\text{min}}$	grad	20	If smaler rotating angles are to be realised in continious operation, the
	-		15 000	manufacturer must be consulted.
maximum radial force	Frmax		15 000	force acting centered on the journal of the drive shaft
maximum axial force	F ax max		7 500	force acting centrically on the journal of the drive shaft
weight $\approx$ mass moment of inertia of drive shaft	m J <sub>wo</sub>	kg kgdm²	125.0	<ul> <li>± 10%, incl. oil filling</li> <li>± 5%, without other attachments such as hub, coupling, rotation encoder, etc.</li> </ul>
max. angular speed	ω <sub>max</sub>	rad/s cm³/°	2.5 9.62	This corresponds to 143 deg/s or an equivalent rotational speed of n= 24 min <sup>-1</sup> . <sup>1</sup> ) This results in a theoretical operating volume of $V_A$ = 2 694.2 cm <sup>3</sup> . <sup>2</sup> )
specific displacement theoretical volume flow rate required	V sp Q th	l/min	9.02 82.7	at $\omega = \omega_{max}$ 2)
max. internal leakage volume flow rate	Q tri Q L max	l/min	0.46	at $\Delta p = p_{N max}$ and v=50 mm <sup>2</sup> /s <sup>3</sup> ) <sup>4</sup> )
effective required volume flow rate	Q L max Q eff	l/min	83.2	at $\Delta p = p_{N \max}$ and $v = 50 \text{ mm}^2/\text{s}$ (1) at $\Delta p = p_{N \max}$ , $\omega = \omega_{\max}$ and $v = 50 \text{ mm}^2/\text{s}$ (3) <sup>4</sup> )
permissible pressure fluid	<b>γ</b> eπ	VIIIII	00.2	HLP mineral oils according to DIN 51524 T2
temperature range of pressure fluid	<del>9</del> öι	°C	-20 - +80	The viscosity range set in operation is to be observed.
range of kinematic viscosity	ν	mm²/s	18 - 150	short-term, the optimum operating viscosity range is $30 - 50 \text{ mm}^2/\text{s}$
cleanliness class of pressure fluid	v		10 100	Max. permissible degree of pollution according to ISO 4406 class 18/16/13. To increase service life, we recommend according to ISO 4406 class 17/15/12.
range of ambient temperature	θ	°C	0-+60	
design of component surfaces				metallic bright and wetted with anticorrosion agents
				Subject to technical modifications and error

Subject to technical modifications and error!

1) The simultaneous occurrence of two or more maximum values of temperature, pressure and angular speed requires the written consent of the manufacturer!

<sup>2</sup>) Theoretically determined value without manufacturing tolerances and if so an efficiency.

<sup>3</sup>) Median recorded in test series; an inferential variance is possible.

<sup>4</sup>) In mint condition of the internal seals and their counter-surfaces!
